Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Any reply received by the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-27 are rejected under 35 U.S.C. 102(e) as being anticipated by
Wilson (US 6,637,340).

Wilson discloses a device for grabbing spaced apart rails 14. The rails are shown to be spaced from each other in figure 3. The device is comprised of a frame 20 having a plurality of movable elements 54, 64 coupled to the frame and driven by a hydraulic unit 18. The movable elements 54, 64 move in such a manner so as to engage the rail. Actuators 44 are positioned at the transverse ends of the frame 20 as shown in figures 5 and 6. These actuators control the movable elements 54, 64 at the longitudinal ends of the frame 20 and are powered by the hydraulic unit 18 that is mounted separate from frame 20. Cables 12 connect from the device to an apparatus for moving and positioning the device over the rails. The device is also positioned by an operator that sets the movable elements 54, 64 off set from the center point where the two adjacent rails will meet.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Young et al (US 5,191,839), Williams (US 6,089,163) and Rosenquist et al (US 6,220,169) all disclose types of devices for moving and handling rails and track parts.
